

Which university is the greenest of them all?

Who will take the top spot in this year's People & Planet Green League table? All will be revealed when the full results are released on Tuesday 7th June at 1pm*.

<http://peopleandplanet.org/greenleague>

People & Planet is pleased to offer your publication:

- **the opportunity to publish full or top 20 league table results***
- **regional, national or bespoke versions of the league table + analysis**
- **Analysis and interviewees for features**

The award-winning People & Planet Green League is the only ranking of all UK universities by environmental and ethical performance. This year's league table results will reveal which of the UK's 143 universities has:

- the biggest carbon footprint and most ambitious plans to reduce it
- the curriculum most likely to produce graduates suited to a fast-changing world
- the most renewable energy generated on-site
- the most ethical investment and Fairtrade procurement policies
- the best recycling rates, water reduction and sustainable food on-site
- and much more.

This 5th edition of the People & Planet Green League comes as funding cuts start to threaten sustainability budgets within the higher education sector, yet the need for action remains higher than ever.

Louise Hazan, People & Planet's climate change campaigner, said:

"The People & Planet Green League provides the only comprehensive analysis of which universities are making the grade in preparing their students for a fair and sustainable future. With most universities proposing to charge huge tuition fees, students want to know their money is being well spent, not wasted on fuelling climate change."

"This year's People & Planet Green League will be the biggest yet, with over 140 institutions taking part and willing to pit their eco-credentials against each other. Climate change is a huge concern for a growing proportion of students and our league table provides the best analysis available to help them make an informed choice."

"For Vice-Chancellors, the People & Planet Green League provides a wake-up call - those who fail to cut their carbon emissions face a further 40% cut in their capital budgets from the funding councils".
